

THE PLAN

one

two

three

FILL OUT THE CARIES RISK ASSESSMENT FORM AND SCREEN THE PATIENT WITH THE CARISCREEN TESTING METER

- **At Risk Patients**

- Receive dietary and behavioral counseling based on their individual risk factors
- Receive an application of CariFree Fluoride Varnish
- Receive the 3-month CariFree Treatment Kit

- Rescreen the patient after 3 months
- Repeat Fluoride Varnish application
- If patients are assessed to still be at risk, they should take home another Treatment Kit
- If their reading is below 1,500, they should take home a Maintenance Kit

! Once converted, these patients should have a Caries Risk Assessment performed every 3-6 months and be treated accordingly
